

Custom Job Search Performance Report

Template: default

Generated: 12/4/2025, 11:12:28 AM

Summary Insights:

Applications: 0

Interviews: 0

Offers: 0

Recommendations:

- Your interviews per application are below typical peers. Focus on higher-match roles, warm referrals, and tailoring applications to improve your hit rate.
- Your offers per interview are lower than average. Add more targeted interview prep, mock interviews, and stories that highlight measurable impact.
- You're currently investing less time in job search than typical peers. Try reserving 2–3 recurring blocks per week for focused applications and outreach.
- Your skills cover about 0% of the common stack for SWE roles. Prioritize learning: javascript, typescript, react, node.js, express.
- Add your prior roles to the Employment section so we can better benchmark your experience against typical levels for your target role.
- Clarify your 1–2 sentence value proposition (who you help, how you help them, and what proof you have). Use it consistently on your resume, LinkedIn, and in interviews.
- Look for ways to combine your skills into a unique niche (for example: backend + data + domain expertise in a particular industry) to stand out from generalist applicants.
