Applications: 0
Interviews: 0
Offers: 0
Conversion Rate: 0%

Top Insights:
• Your interviews per application are below typical peers. Focus on higher-match roles, warm referrals, and tailoring applications to improve your hit rate.
• Your offers per interview are lower than average. Add more targeted interview prep, mock interviews, and stories that highlight measurable impact.
• You're currently investing less time in job search than typical peers. Try reserving 2–3 recurring blocks per week for focused applications and outreach.
• Your skills cover about 0% of the common stack for SWE roles. Prioritize learning: javascript, typescript, react, node.js, express.
• Add your prior roles to the Employment section so we can better benchmark your experience against typical levels for your target role.
• Clarify your 1–2 sentence value proposition (who you help, how you help them, and what proof you have). Use it consistently on your resume, LinkedIn, and in interviews.
• Look for ways to combine your skills into a unique niche (for example: backend + data + domain expertise in a particular industry) to stand out from generalist applicants.
